

What is claimed is:

1. A temporary worker information management system comprising a network, a dispatching terminal connected to the network, a job offer terminal connected to the network, and a dispatching information server
5 connected to the network,

said dispatching terminal comprising:

means for transmitting dispatchable temporary worker information representing the number of dispatchable temporary workers, a skill thereof, and a
10 dispatchable period, which have been entered, to said dispatching information server when a dispatchable temporary worker occurs in an organization; and

means for displaying job offer information representing the desired number of dispatched temporary
15 workers, a desired skill thereof, and a desired dispatching period, transmitted from said dispatching information server;

said job offer terminal comprising:

means for transmitting job offer information
20 representing the number of temporary workers desired to be dispatched, a skill thereof, and a desired dispatching period, which have been entered, to said dispatching information server when a request for a temporary worker occurs; and

25 means for displaying dispatchable temporary

worker information transmitted from said dispatching
information server;

said dispatching information server
comprising:

30 means for registering dispatchable temporary
worker information transmitted from said dispatching
terminal;

means for registering job offer information
transmitted from said job offer terminal;

35 means for searching job offer information
registered therein when dispatchable temporary worker
information is transmitted from said dispatching
terminal, and, if there is job offer information that
matches said dispatchable temporary worker information,
40 transmitting said dispatchable temporary worker
information to said job offer terminal which has
registered the matching job offer information; and

means for searching dispatchable temporary
worker information registered therein when job offer
45 information is transmitted from said job offer terminal,
and, if there is dispatchable temporary worker
information that matches said job offer information,
transmitting the matching dispatchable temporary worker
information to said job offer terminal.

2. A temporary worker information management system

according to claim 1, wherein a user of the temporary
worker information management system registers user
information in said dispatching information server, said
5 dispatching information server comprising means for
authenticating the user based on the registered user
information when said dispatching information server is
logged in.

3. A temporary worker information management
system according to claim 1, wherein each of a temporary
worker dispatcher and a temporary worker recipient pays a
fixed membership fee and a predetermined ratio of a
5 dispatching cost to an administrator of said dispatching
information server.

4. A temporary worker information management
system according to claim 1, wherein said dispatching
terminal, said job offer terminal, and said dispatching
information server are installed in a company or
5 companies which cooperate with each other.

5. A temporary worker information management
system according to claim 1, wherein said job offer
terminal further comprises:

means for transmitting an entered evaluation
5 report on an evaluation of the skill of a dispatched

temporary worker to said dispatching information server;

means for transmitting an entered dispatching contract evaluation information referring request to said dispatching information server; and

10 means for displaying dispatching contract evaluation information transmitted from said dispatching information server;

wherein said dispatching terminal further comprises:

15 means for transmitting an entered dispatching contract evaluation information referring request to said dispatching information server; and

means for displaying dispatching contract evaluation information transmitted from said dispatching information server; and

20 wherein said dispatching information server further comprises:

means for generating dispatching contract evaluation information which reflects details of an evaluation report transmitted from said job offer terminal, registering the generated dispatching contract evaluation information therein, and transmitting the generated dispatching contract evaluation information to said dispatching terminal; and

30 means responsive to dispatching contract evaluation information referring requests transmitted

from said dispatching terminal and said job offer terminal, for transmitting dispatching contract evaluation information registered in said dispatching information server to said dispatching terminal and said job offer terminal.

6. A temporary worker information management system according to claim 5, wherein said dispatching information server comprises means for registering user information of a user of the temporary worker information management system in advance, and authenticating the user based on the registered user information when said dispatching information server is logged in.

7. A method of managing temporary worker information of the temporary worker information management system, comprising the steps of:

transmitting dispatchable temporary worker information representing the number of dispatchable temporary workers, a skill thereof, and a dispatchable period, which have been entered, from a dispatching terminal to a dispatching information server via a network when a dispatchable temporary worker occurs in an organization;

displaying, on said dispatching terminal, job offer information representing the desired number of

dispatched temporary workers, a desired skill thereof,
and a desired dispatching period, transmitted from said
15 dispatching information server via said network;
transmitting job offer information
representing the number of temporary workers desired to
be dispatched, a skill thereof, and a desired dispatching
period, which have been entered, from a job offer
20 terminal to said dispatching information server via said
network;
displaying, on said job offer terminal,
dispatchable temporary worker information transmitted
from said dispatching information server via said
25 network;
registering, in said dispatching information
server, dispatchable temporary worker information
transmitted from said dispatching terminal via said
network;
30 registering, in said dispatching information
server, job offer information transmitted from said job
offer terminal via said network;
searching job offer information registered in
said dispatching information server when dispatchable
35 temporary worker information is transmitted from said
dispatching terminal to said dispatching information
server via said network, and, if there is job offer
information that matches said dispatchable temporary

worker information, transmitting said dispatchable
40 temporary worker information to said job offer terminal
which has registered the matching job offer information
via said network; and

searching dispatchable temporary worker
information registered in said dispatching information
45 server when job offer information is transmitted from
said job offer terminal to said dispatching information
server, and, if there is dispatchable temporary worker
information that matches said job offer information,
transmitting the matching dispatchable temporary worker
50 information to said job offer terminal via said network.

8. A method according to claim 7, wherein a user
of the temporary worker information management system
registers user information in said dispatching
information server, further comprising the step of
5 authenticating the user based on the registered user
information when said dispatching information server is
logged in.

9. A method according to claim 7, wherein each of
a temporary worker dispatcher and a temporary worker
recipient pays a fixed membership fee and a predetermined
ratio of a dispatching cost to an administrator of said
5 dispatching information server.

10. A method according to claim 7, wherein said dispatching terminal, said job offer terminal, and said dispatching information server are installed in a company or companies which cooperate with each other.

11. A method according to claim 7, further comprising the steps of:

transmitting an entered evaluation report on an evaluation of the skill of a dispatched temporary
5 worker from said job offer terminal to said dispatching information server via said network;

generating dispatching contract evaluation information which reflects details of an evaluation report transmitted from said job offer terminal via said
10 network; registering the generated dispatching contract evaluation information in said dispatching information server;

transmitting the generated dispatching contract evaluation information to said dispatching
15 terminal via said network;

transmitting an entered dispatching contract evaluation information referring request from said job offer terminal to said dispatching information server via said network;

20 transmitting an entered dispatching contract

evaluation information referring request from said
dispatching terminal to said dispatching information
server via said network;

transmitting dispatching contract evaluation
25 information registered in said dispatching information
server to said dispatching terminal and said job offer
terminal via said network in response to dispatching
contract evaluation information referring requests
transmitted from said dispatching terminal and said job
30 offer terminal;

displaying dispatching contract evaluation
information transmitted from said dispatching information
server via said network on said job offer terminal; and

displaying dispatching contract evaluation
35 information transmitted from said dispatching information
server via said network on said dispatching terminal.

12. A method according to claim 11, further
comprising the steps of registering user information in
said dispatching information server in advance, and
authenticating a user based on the registered user
5 information when said dispatching information server is
logged in.

13. A dispatching terminal comprising:
means for transmitting dispatchable temporary

worker information representing the number of
dispatchable temporary workers, a skill thereof, and a
5 dispatchable period, which have been entered, to a
dispatching information server via a network when a
dispatchable temporary worker occurs in an organization;
and

means for displaying job offer information
10 representing the desired number of dispatched temporary
workers, a desired skill thereof, and a desired
dispatching period, transmitted from said dispatching
information server;

14. A job offer terminal comprising:

means for transmitting job offer information
representing the number of temporary workers desired to
be dispatched, a skill thereof, and a desired dispatching
5 period, which have been entered, to a dispatching
information server when a request for a temporary worker
occurs; and

means for displaying dispatchable temporary
worker information transmitted from said dispatching
10 information server.

15. A dispatching information server comprising:

means for registering dispatchable temporary
worker information transmitted from a dispatching

terminal;

5 means for registering job offer information
transmitted from a job offer terminal;

 means for searching job offer information
registered in the dispatching information server when
dispatchable temporary worker information is transmitted
10 from said dispatching terminal, and, if there is job
offer information that matches said dispatchable
temporary worker information, transmitting said
dispatchable temporary worker information to said job
offer terminal which has registered the matching job
15 offer information; and

 means for searching dispatchable temporary
worker information registered in the dispatching
information server when job offer information is
transmitted from said job offer terminal, and, if there
20 is dispatchable temporary worker information that matches
said job offer information, transmitting the matching
dispatchable temporary worker information to said job
offer terminal.

16. A recording medium storing:

 a program executable by a dispatching terminal
computer connected to a dispatching information server
computer and a job offer terminal computer via a network,
5 for carrying out the steps of transmitting dispatchable

temporary worker information representing the number of dispatchable temporary workers, a skill thereof, and a dispatchable period, which have been entered, to said dispatching information server computer when a

10 dispatchable temporary worker occurs in an organization, and displaying job offer information representing the desired number of dispatched temporary workers, a desired skill thereof, and a desired dispatching period, transmitted from said dispatching information server

15 computer;

a program executable by the job offer terminal computer connected to the dispatching information server computer and the dispatching terminal computer via the network, for carrying out the steps of transmitting job

20 offer information representing the number of temporary workers desired to be dispatched, a skill thereof, and a desired dispatching period, which have been entered, to said dispatching information server computer when a request for a temporary worker occurs, and displaying

25 dispatchable temporary worker information transmitted from said dispatching information server computer; and

a program executable by the dispatching information server computer connected to the job offer terminal computer and the dispatching terminal computer

30 via the network, for carrying out the steps of registering dispatchable temporary worker information

transmitted from said dispatching terminal computer,
registering job offer information transmitted from said
job offer terminal computer, searching job offer
35 information registered in the dispatching information
server computer when dispatchable temporary worker
information is transmitted from said dispatching terminal
computer, and, if there is job offer information that
matches said dispatchable temporary worker information,
40 transmitting said dispatchable temporary worker
information to said job offer terminal computer which has
registered the matching job offer information, and
searching dispatchable temporary worker information
registered in the dispatching information server computer
45 when job offer information is transmitted from said job
offer terminal computer, and, if there is dispatchable
temporary worker information that matches said job offer
information, transmitting the matching dispatchable
temporary worker information to said job offer terminal
50 computer.
